Project Title: Task Manager

Category: Web-based Application

Project short Description:

The application is mainly focused on helping professionals manage and organize their daily tasks. It will help the users to list down their tasks and update their status (Open, On Progress, Done).

This application is also very useful to manage team work. The team leader can create tasks and assign team members to those tasks and after completing those tasks the team members can update the task status to completed. This process helps to keep track of the projects work flow and maintain the work quality. Also, it helps to track how much time a team member or user is taking to complete the task.

So, this application is very helpful for all types of professionals.
